

Improving the quality of advice to planning system users

Free resources and content for Town and Parish Councils

The Planning Portal Service
is provided by

Introduction

At a time of significant resource and budget constraint it is clear that council websites at all levels are gaining increasing importance as primary channels for communication and interaction.

For a long time local councils have recognised this fact and many examples of excellent practice exist, indeed some councils are leading the way in the use of social media to connect with their communities.

These factors place an increasing demand on council resources, especially at a local level, to provide content and services that meet the requirements and expectations of our communities today. This, coupled with increasing expectations of what a council's online presence should deliver, means it can be time consuming, difficult and costly to maintain a high-quality accessible service.

In common with any other web service, the long-held maxim that on the internet content is king, has never been truer. This short document aims to assist town and parish councils by providing links to the most commonly requested planning and development content. These links aim to reduce the need to develop and maintain local content on topics that are consistent, regardless of location.

These links are designed to sit alongside local content enriching the user's understanding of the topic, ensuring communities and individuals find what they need, when they need it, anytime and anywhere.

This guide outlines the benefits that may be achieved by implementing effective links to the Planning Portal's trusted content. It also includes examples of how Local Planning Authorities have taken advantage of this and discovered for themselves the benefit of this approach. Similarly many of these benefits can be replicated by local councils too.

The document supports Communities and Local Government's Killian Pretty Review to increase the awareness of planning and simplify how to engage and understand its processes. One of the key recommendations states that "Government, Local Planning Authorities and others should take steps to improve the quality of advice available for all users of the planning system."

Benefits include:

- Content that is constantly updated to reflect changing legislation
- Simple, user-centred guidance and helpful interactive tools
- A reduction in the number of avoidable contacts, supporting NI14 commitments

The Planning Portal is provided by the Department for Communities and Local Government and is a one-stop shop for content and services relating to planning and building control. This includes several award-winning services including The Standard National Planning Application Form suite, 1App.

This document was compiled following extensive research into the information needs of planning customers and provides helpful advice on the variety and implementation of effective links to the Planning Portal's content.

The Planning Portal team is committed to helping town and parish councils meet the demands of 21st century communities with tools, content and services that support your efforts to deliver information on planning services.

Chris Kendall, Director, Planning Portal

The benefits of linking to our content

Save time dealing with planning enquiries

A website that offers good quality information will reduce the need for users to contact local council staff from the councillors to clerks. By linking to the Planning Portal directly, communities and citizens may find the answer they need before contacting you.

Linking to the Planning Portal can:

- Reduce the number of general enquiries you have to respond to
- Increase the percentage of informed questions regarding local policies, constraints or planning applications in the area you receive
- Increase the quality of questions you are asked

This will result in less time spent handling general planning enquiries, freeing up time to focus on other tasks. Our research shows most town and parish councils are regularly contacted with enquiries about, "Do I need planning permission". The Planning Portal's Interactive House can often answer the question without the need for further interaction.

Weymouth and Portland Borough Council has been linking to areas of the Planning Portal from its own website for some time now.

This authority already links to some of the Planning Portal's main areas including those that facilitate and provide guidance on the submission of online applications, whether or not planning permission is needed, local development plans and links to various Portal pages direct from its FAQ system. Weymouth and Portland consider these links to be very helpful and have found linking to the Portal particularly beneficial in avoiding duplication of information, avoiding the need to produce this information themselves.

This has been recognised as a big saving, particularly in terms of the quality of service now provided which helps self-educate the public on the planning process for them to comment on proposals.

Ann Crutwell, Weymouth and Portland Planning Department

Increase the quality of planning applications and how to use the online service

Enabling your communities to easily access the information available on the Planning Portal website will facilitate a better understanding of how to complete a good quality planning application. The Planning Portal also hosts the electronic application form which is specifically designed to provide support via low-level validation of applications and comprehensive video and help text.

The image shows two overlapping screenshots of the Planning Portal website. The top-left screenshot displays the main navigation menu under 'Planning Applications', including links for 'Online Applications', 'Building Work', and 'Appeals'. The bottom-right screenshot shows a video player titled 'Make application' with a play button overlay. Below the video player, there are links to 'Return to the video selection menu.' and 'View a subtitled version of the above video or read the transcript below:'.

Deep links to these areas of the Planning Portal direct citizens to these valuable aids quicker, increasing the quality of the applications they submit and improving their knowledge and understanding of the process and procedures.

An essential resource for Town and Parish Council communities

The information available on the Planning Portal can also benefit you when dealing with enquiries. Whether it is to provide a link to the information for research at home or simply providing a reference point, the Planning Portal can help.

Improving the quality of information available improves the level of customer service you can offer leading to better informed citizens and communities.

"The application submission area has been a great success and the number of users is increasing all the time. The permitted development advice is very useful and has meant that we do not have to create our own guidance for permitted development. Users particularly like the 'Useful Tools' section – something we could never produce on our own.

"In addition, our own staff use the Portal as a reference tool. While they still refer to in-house documents, the technical areas of the Portal provide a lot of information that used to be difficult to find."

Chris Dowell, Coventry City Council's planning department

Save time updating your website

Maintaining direct links to planning advice on the Planning Portal means information does not need to be updated on your local website. Content on the Planning Portal is maintained by a dedicated team who have the resources and skills to keep it up to date.

Our links with central policy teams mean we are able to react to changing policy as it happens. Feedback from citizens and planning professionals helps us develop new tools and services that once deployed can become immediately available to you, ensuring your citizens and communities benefit from our investment.

The links contained within this document are static and will not change even as the Planning Portal goes through its upcoming redesign.

Customise the links to meet your local need

There are more than 20,000 pages of content on the Planning Portal covering every topic and ranging from entry level advice to technical documents.

In addition, the Portal's content is written to meet the differing needs of both citizens and planning professionals allowing you to tailor your choice of links to your needs.

How much does this cost?

Nothing! The Planning Portal is centrally funded and provides this service as part of its continuing remit to improve the planning process.

Getting started

It's simple – help yourself

Feel free to highlight any appropriate links to the person who updates your website. By placing the links in all the relevant pages of your site, you will be maximising the information you are offering to everyone in your community.

The more information that is made available, the less they will need to contact you for general planning enquiries, guidance and advice which in turn will save you time and money.

Perhaps the place to start is with a review of your current content.

Whatever your approach we are happy to help.

The links

The following links represent a tiny fraction of the content available to you and your communities. We've selected a few we regard as essential and made other suggestions, however, you are free to consider linking to any relevant content.

The Planning Portal recommends the following links as essential for local planning pages:

These links have been chosen because they are either:

- Fundamental to the planning process and the submission of planning applications
- Were rated as highly valuable by town and parish councils in previous research undertaken
- Found to be beneficial by the sample of town and parish councils that provided feedback for this project

Therefore, the Portal encourages linking to these pages and using the suggested text to accompany the link.

Please note that these links are to content for the planning system in England. We shall be working closely with the Welsh Assembly Government to improve the content for Welsh Community Councils and a package of work is currently being planned.

The essential links		
Title	Address and description	What is this link?
Make a planning application	www.planningportal.gov.uk/apply Apply here to make an online planning application.	The direct link to the electronic version of the National Standard Application Forms.
Building Work	www.planningportal.gov.uk/guide Find planning and building regulations guidance including case studies on many common projects in the home here.	Links to Planning and Building Regulations guidance.
Visual guide for householders Interactive House/Terrace House	www.planningportal.gov.uk/house Explore the interactive house for guidance on many common householder projects. Explore the interactive terrace for guidance relating to flats, shops and basements as well as many common householder projects, in England.	The Portal's Interactive Houses offer the most user friendly way into planning and building information.
Greener Homes and Micro-generation	www.planningportal.gov.uk/greenerhomes Guidance for householders; providing advice on planning and building regulations matters for green energy projects and energy saving.	A direct link to an increasingly topical subject.

Garage Conversion	www.planningportal.gov.uk/garageconversion	
Wind Turbine	www.planningportal.gov.uk/windturbine	
Windows	www.planningportal.gov.uk/windows	

Best practice guidance on linking

As always with external linking, links should be clearly signposted so that the user is aware of what they will be directed to.

Our research with town and parish councils who already use Portal content has indicated a number of ways in which this can be achieved:

Use the Planning Portal logo: including the Planning Portal logo helps make it clear to the user that they are navigating away from a town or parish council site to the Planning Portal. Adding a brief explanation about the Portal provides even more clarity.

We would recommend something like the following website:

The [Planning Portal](#) is available to you in association with our Planning Services. The Portal is intended to be the first point of call for anyone wanting to find out about the planning system in England and Wales.

If you're looking for local information planning, or want to search for planning applications in Lichfield District, visit our [Planning Section](#).

The Planning Portal provides the latest National Planning News, access to Regulations along with Guidance Notes for applications and the Appeals Procedure.

- [Planning Portal Home Page](#) – The planning portal offers a wide range of services and guidance about the planning system. Here you can check if you require planning permission, read the latest planning news and find out more about planning appeals.
- [Guide to the Planning System](#) – This section gives general information about the kinds of work that you require planning permission for.
- [Online Planning Application](#) – This section allows you to submit a Planning Application electronically.
- [Appeals Guidance](#) – Provides information about planning applications, enforcement and lawful development certificate applications.
- [Policy and Research](#) – This section provides access to chief legislation produced by the government and planning research documents.

Dedicated links area: locating the links in a side menu or other prominent place has proved to be effective and is clear to the user.

Specific links in relevant text also work well when referring to specific information. For example, if you are making reference to satellite dishes then you could provide a link to the Planning Portal's 'Satellite Dish Locator' by adding a link on the text 'Satellite Dish'. The usefulness of direct links has proved very effective because the user relates to the link instantly.

Avoid too many links in one place. Excessive linking will make text difficult to read and can make a page look cluttered and confusing.

Avoid the **overuse of icons**. Links to the Planning Portal home pages and other main sections may warrant an icon. However, overuse of icons, particularly within text, can obliterate information and the free flow of text.

Whatever method is chosen for hyperlinks it is important to maintain a consistent presentation. Hyperlinks should look like hyperlinks and appear distinct from the remainder of the text. This can be achieved by publishing links in a different colour to the main text, underlining them or making the text bold.
